

Overview: Roadway and Drainage Structures, Drainage and Path Design; Environmental / Cultural Coordination and Mitigation; Public Involvement; Surveys; ROW Acquisition

Owner: City of Boulder, CO

Completion: 2009 (Projected)

Elmer's Twomile Greenway Project

Project Description

Centennial is currently working in Boulder to design drainageway improvements, flood mitigation measures, and develop a multi-use path along Elmer's Twomile Creek from Goose Creek to Glenwood Drive.

The project requires new roadway and drainage structures, path design, environmental and cultural resources coordination and mitigation, public involvement, surveys and right-of-way acquisition.

Due to a confined drainageway and bordering high-density residential and commercial properties, this project requires close coordination between many disciplines and demonstrates Centennial's ability to respond to the client's desire to accommodate the adjacent property owners through public process. Project design is underway and within budget.

Elmer's Twomile Greenways Project Requires Significant Drainage and Floodway Improvements.

SERVICES

Structural Engineering & Design
Roadway Design
Construction Engineering
Traffic Engineering
Intelligent Transportation Systems (ITS)
Surveys & Right-of-Way
Information Technology Systems
